

# YOUR LOCK. YOUR LIFE. OWN YOUR SAFETY.

## What Every Worker Needs to Know About LOTO

**Your lock is the only thing standing between you and a machine that thinks no one is working on it.**

### WHY IT MATTERS

**Machines can restart without warning.**

Balers, compactors, shredders, conveyors, sorting systems, automated robotics, and even collection vehicles can start again in seconds.

**Quick fixes are high risk.**

Clearing jams, wiping equipment down, or making quick adjustments is when most LOTO injuries occur.

**Your lock means your protection.**

No one else can remove your lock.  
No one else is responsible for putting it on.

**Never start a job on energized equipment without locking it out yourself — no exceptions, no shortcuts.**

**No job is so urgent that it is worth your hands, your eyes, or your life.**

**Lock out. Every single time.**
